

## **Client Intake Form**

### **Audience (who)**

**Who** are the learners?

2<sup>nd</sup> year college students at Duke University, a private college in Durham, NC. The students are taking the Fairy Tales of Grimm's to Disney course within the German Language and Literature department.

### **Learning objectives (what)**

**What** do they need to learn (a.k.a., what are the learning objectives you need to establish based on the client's needs)?

Students will create an audio presentation retelling of a Grimm's fairy tale with sound effects, music, narration and character voice acting to support auditory learners and blind students in class.

### **Timing (when)**

**When** and how often will the work be delivered to the client?

This project will be completed and presented by Week 14 of the 15-week semester course.

### **Delivery (where)**

**Where** will it be delivered for deployment (via LMS, stand-alone link, or part of a larger program)?

The audio presentation will be showcased on the Sakai learning management system, which is an open-source software program that allows embedding of audio assets from Soundcloud. Soundcloud is where the presentation files will be uploaded and stored.

### **End goal (how)**

**How** will success be measured for both you and the client?

Success will be measured by two client formative reviews using a rubric and completion of an immersive, audio production of storytelling that will provide excellent example and insight for student final audio/video presentation that will also support auditory learners and blind students.
